

High-End Two-Channel Sub/Sat

- Small and Unimposing
- Modern styling
- Discrete Class AB amplification
- Over-sampled 176.4kHz/192kHz audio
- 24-bit resolution stereo sound

Sub/sat systems comprise of a subwoofer and satellite speakers, where the subwoofer reproduces low to lower-mid frequencies and the satellite speakers (typically very small) handle the upper-mid to high frequencies.

They are designed to be physically discreet and not impose on the room, and form prevails over function. Invariably, all 'lifestyle' products adhere to this philosophy. There is one major pitfall with this way of thinking, performance is compromised for size.

Not any more, the Perreux Silhouette series represents the future of 'lifestyle' systems. The Silhouette series has a compact footprint that offers a plethora of arrangement options, whilst possessing elegant styling that blends and complements any décor.

Do not be tricked into thinking the small stature means it does not pack a punch. The SX25i Integrated Amplifier has one of the highest power densities (Watts per cubic centimetre) of any analogue amplifier on the market. This translates to small and powerful.

Martin Bell, a reviewer for technology magazine '>>FFWD', had this to say about the SX25i:

“The baby Perreux's 25 watts are delivered with vim and verve – so much so that it makes most 100-watt-plus leviathans sound bloated and ponderous.”

The SxD2 USB DAC packs features like over-sampling to 176.4kHz/192kHz and 24-bit resolution, for signal reproduction that accurately reproduces the artists expressions at that exact moment. USB connectivity, plug-in your new iBook and access your entire iTunes music library. Do not be restricted to the trusty CD player.

The SXD2 inspired these words from Martin Bell:

“While bass output was tight, tuneful and free from overhang...

...it was also remarkably clean with a low noise floor, fine focus and an expansive soundstage.”

Bringing the loudspeakers into the mix, there are a multitude of speakers available (e.g. 'Paradigm' Mini Monitor, 'Monitor Audio' R90, 'Image' Performa) which share proportions comparable to those of satellite speakers. Being small, efficient and easy to drive, the SX25i will be in its element powering these speakers.

A matching subwoofer (e.g. 'Paradigm' UltraCube 10, 'Monitor Audio' R360, 'Image' AVS100.2) rounds off the package and completes the high-end sub/sat system.

Resulting in a 'lifestyle' system with one major difference... it sounds superb!!
